

Extended Lightning Protection Kit†

CODAR Product Code: LT-E1

Product Description:

The SeaSonde Extended Lightning Protection Kit, CODAR Product Code LT-E1, is an optional secondary lightning protection package set in a small weatherproof housing mountable either indoors or outdoors intended to provide one additional layer of electronics protection. It uses the same gas discharge tube method on all transmit and receive cables connected to the electronics. It is not a guarantee against damage but is another technology that may help protect the electronics chassis if either antenna or antenna cables take a direct hit.
